

Dave Wilson believes...

...in the end result. He has spent a lifetime refining the art and science of the empirical approach. Dave knows that engineers and technicians are often seduced by exotic high-tech elements, which they eventually incorporate into their new products. However, the technical veracity of any given part, no matter how it appears on paper, is only as good as the experience it produces. For Dave, the experience is everything.

Announcing Alexandria XLF

Coming early 2012. The Alexandria XLF is a new model positioned above the existing Alexandria X-2 Series 2, which will continue in production. The retail price will be \$195,000.00 U.S. Full details will be revealed in a press release December 15, 2011.

Preliminary information:

New driver technology developed by Wilson—details to come December 15, 2011.

A completely new **passive bass management system**. Wilson's have always been configurable in the time domain for each installation. The XLF designation refers to Wilson's new bass management system. This simple system will allow users to optimize bass quality and extension to match the characteristics of the sound room. Since the system is completely passive, it avoids the sonic pitfalls endemic to all active bass management systems.

New Architecture. While instantly recognizable as an Alexandria, the XLF version has undergone a major cosmetic revision. Additionally, using Wilson's latest cabinet-analysis tools, Wilson's engineers lowered the already vanishingly low resonant contribution of the enclosure.

The Alexandria XLF is constructed using **Wilson's latest composite materials**, including S-material.

Wilson is currently taking orders on a first-come, first-served basis. First shipments are expected early 2012. As mentioned, full details will be available December 15, 2012.
