Ayre ► *AX-5: integrated amplifier*

The Ayre AX-5 integrated amplifier signals a breakthrough in performance for music lovers, providing a breathtaking level of sonic quality by replacing a separate preamplifier and power amplifier with a single integrated control amplifier.

The key to perfecting the AX-5 was to incorporate the Variable Gain Technology (VGT) of the award-winning Ayre KX-R preamplifier into the power amplifier section. The addition of ultra-transparent FET input selector switches completed the transformation of a basic power amplifier into a compact one-box solution which will become the heart of your high-performance audio system.

Featuring Ayre's new Diamond output stage, our exclusive EquiLock circuitry, and a Shallco solid-silver contact switch for gain control, this fully-discrete, fully-balanced, zero-feedback integrated amplifier provides a complete solution for your modern music system.

Features:

- Ayre's new Diamond output stage
- Zero-feedback, fully-balanced discrete circuitry
- Linear analog power supply
- Ayre's exclusive EquiLock circuit
- High-speed circuit board material
- Custom developed audio-grade resistors
- Proprietary polystyrene capacitors
- Ayre Conditioner power line RFI filter
- AyreLink communication system

Specifications:

Power Output: 125 watts per channel continuous (8 ohms)
250 watts per channel continuous (4 ohms)

Gain: 26 dB

Input Impedance: 2 Mohm balanced
1 Mohm single ended

Frequency Response: DC - 250 kHz

Power Consumption: 100watts (15 watts in standby mode)

Dimensions: 17.25" W x 18.75" D x 4.875" H
(44cm x 48cm x 12cm)

Weight: 40 pounds (18 kg)
