AUDIO DESIGN

AMBITIOUS 1

After years of research and development we are proud to introduce our new loudspeaker **AMBITIOUS 1**

- transforming 350 kilos of aluminum...

To avoid distortion and coloration we designed an enclosure that makes **AMBITIOUS 1** extremely rigid.

Mixing anodized aluminum with stainless steel, brass and carbon fibre we made an advanced construction - setting new standards.
And the perfect foundation for high-end performance.

AMBITIOUS 1 weighs 58 kilos. To manufacture each speaker we use 175 kilos of premium aluminum processed with cutting-edge technologies.

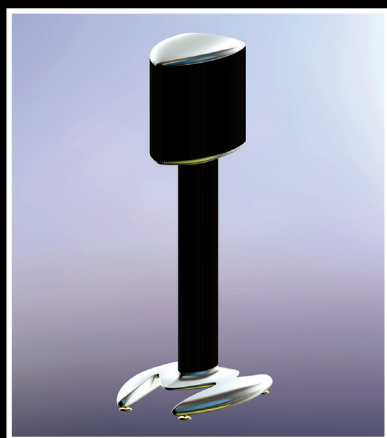

Besides the unique enclosure, more parts are naturally of major importance for the high-end performance. The performance of drivers and crossovers is second to none.

Further information is available at our website.

AMBITIOUS 1 is the first in a series
of AMBITIOUS loudspeakers.

AMBITIOUS

AUDIO DESIGN

Our interest in high performance audio makes research and development most important to Ambitious Audio Design.

Over the years, we tested a lot of equipment, speakers, designs, new materials and new technologies.

For the past 5 years, a team of specialists has been working with the development of AMBITIOUS 1.

Reaching for higher performance, every part of the speaker has been under examination for improvements.

More improvements have been developed and they will be introduced - for the first time - in AMBITIOUS 1.

AMBITIOUS 1 will be ready for production in 2015.

More AMBITIOUS speakers will follow.

Ambitious Audio Design is founded by Poul H. Hansen who has designed loudspeakers for more than 30 years.
